Python Data Analysis Project (GitHub Ready)

Project Title

Customer Sales Data Analysis using Pandas

Project Goal

Analyze a dataset, clean it, and generate meaningful insights using Python.

This project demonstrates:

- Loading CSV files using Pandas
- Data cleaning
- Data filtering
- Data grouping and aggregation
- Summary statistics generation
- Data visualization using Matplotlib
- Professional coding practices
- GitHub-ready project structure

Technologies Used

- Python 3
- Pandas
- NumPy
- Matplotlib
- CSV Dataset

Project Structure

```
customer-sales-analysis/
│
├── data/
│   └── sales_data.csv
│
├── screenshots/
```

```
│   ├── output1.png
│   ├── graph1.png

└── sales_analysis.ipynb
```

Step 1: Install Required Libraries

```
pip install pandas matplotlib numpy
```

Or:

```
pip install -r requirements.txt
```

---

requirements.txt

```
pandas==2.2.3
numpy==2.1.2
matplotlib==3.9.2
```

Sample Dataset (sales_data.csv)

Create this CSV file inside the data folder.

```
OrderID,CustomerName,Category,Product,Quantity,Price,City,OrderDate
1001,Rahul Sharma,Electronics,Laptop,1,55000,Mumbai,2025-01-10
1002,Priya Mehta,Clothing,T-Shirt,3,1500,Pune,2025-01-12
1003,Amit Verma,Electronics,Mobile,2,30000,Delhi,2025-01-15
1004,Neha Singh,Furniture,Chair,4,8000,Bangalore,2025-01-18

    analyzer.run_analysis()
```

Expected Output

```
Dataset loaded successfully.

========== SUMMARY STATISTICS ==========

         OrderID   Quantity         Price   TotalAmount
count    10.0000   10.0000      10.0000      10.0000
mean   1005.5000    2.4000   20650.0000   52300.0000

========== CATEGORY-WISE SALES ==========
Electronics    315000
Furniture       44000
Clothing        20500

========== BUSINESS INSIGHTS ==========
Highest Sales Category: Electronics
Highest Sales City: Mumbai
Top Selling Product: Headphones
Total Revenue Generated: ₹523000
```

Jupyter Notebook (sales_analysis.ipynb)

You can create a notebook version with these sections:

1. Import Libraries
2. Load Dataset
3. Explore Dataset
4. Data Cleaning
5. Filtering and Grouping
6. Summary Statistics
7. Visualizations
8. Business Insights
9. Conclusion

README.md

```
# Customer Sales Data Analysis using Python

## Project Overview
```

```
This project performs professional sales data analysis using Pandas.
It demonstrates data cleaning, filtering, grouping, visualization,
and generation of business insights.

---

## Features

- Load CSV dataset using Pandas
- Clean missing and duplicate data
- Generate summary statistics
- Perform filtering and grouping
- Create graphs using Matplotlib
- Generate meaningful insights
- Professional Python coding structure

---

## Technologies Used

- Python 3
- Pandas
- NumPy
- Matplotlib

---

## Installation

Clone repository:

```bash

git clone https://github.com/your-username/customer-sales-analysis.git
```

Move to project folder:

```
cd customer-sales-analysis
```

Install dependencies:

```
pip install -r requirements.txt
```

Run project:
```

```
python analysis.py
```

Dataset

Dataset contains:

- Customer Details
- Product Information
- Sales Data
- Order Dates
- City Information

Key Analysis Performed

- Data Cleaning
- Summary Statistics
- Category-wise Sales Analysis
- City-wise Sales Analysis
- Top Selling Products
- Revenue Analysis
- High-value Sales Filtering

Output Graphs

- Category-wise Sales Graph
- City-wise Sales Graph

Author

# Important Concepts Used

## Pandas Functions

```python
pd.read_csv()
```
```

```
df.head()
df.info()
df.describe()
df.groupby()
df.dropna()
df.drop_duplicates()
```

Data Cleaning Techniques Used

✅ Missing value handling

✅ Duplicate removal

✅ Data type conversion

✅ New calculated column creation

Filtering Examples

```
high_sales = df[df['TotalAmount'] > 50000]
```

Grouping Examples

```
df.groupby('Category')['TotalAmount'].sum()
```

Graphs Generated

Bar Charts

- Category-wise sales
- City-wise sales

What does groupby() do?

It groups data based on specific columns for aggregation and analysis.

Why use describe()?

It generates statistical summaries like mean, count, min, max, and standard deviation.

What is filtering in Pandas?

Filtering extracts specific rows based on conditions.

Final Submission Checklist

✅ analysis.py

✅ sales_analysis.ipynb

✅ requirements.txt

✅ README.md

✅ Dataset CSV

✅ Graph screenshots

✅ GitHub repository link

✅ Professional code structure

Conclusion

This project demonstrates professional-level Python data analysis skills using Pandas, NumPy, and Matplotlib. It covers:

- CSV loading
- Data cleaning
- Filtering
- Grouping

- Statistical analysis
- Data visualization
- Business insight generation

making it an excellent academic and GitHub portfolio project.
